

Vantage Marks 10th Anniversary

The decade saw Vantage set industry benchmarks and build a foundation for continued success in leading the hazardous locations connector market. Follow Vantage into the next decade.

Vantage Technology was founded in 1997 with the charter to manufacture electrical connectors for use in hazardous locations. With the strength of established product lines and a staff of experts in the field of explosionproof safety and design, Vantage set forth to meet the market's requirements for strong customer service and a safe and reliable product.

Vantage Explosionproof Connectors

At its conception Vantage understood the importance customers would place on third party product certifications. These, combined with a quality system geared specifically to the manufacture of connectors for use in potentially explosive atmospheres, assure our customers that their installation will perform over the tests of time, usage, and environment. Wherever in the world our connectors are installed, a preeminent NRTL will stand behind our products.

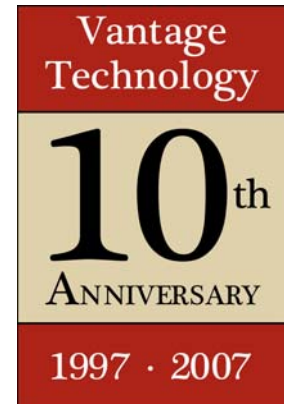

Vantage also realized that a "one size fits all" approach ultimately fails to satisfy customer requirements. Customers should not have to compromise their designs. Vantage provides versatile products with design options that make our connectors capable of meeting the unique requirements each new customer application brings.

Vantage wishes to thank its customers for their support. Their feedback over the years has allowed Vantage to tailor our products and services to their needs.

Vantage is fortunate to have partnered with a strong team of sales representatives that provide local support for our customers. Industry partners, such as LNG leader GMB, provide customers with product support and application knowledge.

Vantage employees are critical to our success. Their commitment to quality and their desire to bring forth the best in product design and innovation has been the keystone in supplying safe and reliable connectors to a wide variety of demanding industries. Their ability to service customers has put Vantage in the forefront.

Vantage has plans to make the next decade even more impressive! New product innovations and pervasive certifications will assure that wherever the final destination is and whatever the application requires, Vantage will meet the customer's needs – all with unparalleled service.

Vantage connectors carry more third party product certifications than any manufacturer. Our proven history of service, safety, and reliability make us the premier manufacturer of connectors for hazardous locations and extreme environments.
